

„Project Engineering Manager China“, located in Shanghai

Our customer is one of the most innovative global high-tech-companies in the chemical industry with headquarters in Germany. Due to the company's long-term growth strategy in the BRIC countries (Brasil-Russia-India-China), our customer is searching for a "Project Engineering Manager China".

For this new established management position we are searching for an entrepreneurial candidate of Chinese origin, fluent in Chinese and English, experienced in cooperation with European or American companies, with a strong (process) engineering or chemical industry background and high willingness to travel within China and the world.

The "Project Engineering Manager" will report directly to the company's country manager in China, located in Shanghai and functionally to the Corporate Head of Project Engineering in Germany. Therefore experience with German culture and language would be an advantage. The remuneration package is highly competitive

Main responsibilities:

- Self reliant and responsible preparation, management, coordination and execution of large investment projects for all Business Units
- Management of these projects in all phases from concept development to start-up
- Generation/evaluation of cost estimates, profitability analysis, appropriation requests
- Interdisciplinary coordination of all major technical disciplines
- Management of resources ; project controlling; risk management
- Provision of project reports to Business Units and Group Functions
- Technical and/or disciplinary guidance of project teams
- Contractor management as the owner's representative and management of permit issues with local authorities
- Contract management in close cooperation with procurement and legal department
- Responsible for the achievement of the projects goals (i.e quality, budget, timing)
- Responsible for safety and environmental issues within the project scope
- Responsible for compliance with legal requirements and the company's guidelines

Required qualifications:

- Several years of experience with project management and project execution, preferably in the chemical industry
- International experience in the cooperation with companies from Western Europe and / or Northern America
- Advanced knowledge in project management, project controlling, claims- and contract management
- (Master) University diploma in Chemical Engineering or Mechanical Engineering or a comparable work experience
- Solid knowledge in all disciplines of plant and chemical engineering
- Some experience in the field of construction, plant technology and plant start-up
- Good leadership, team building, communication and organisational skills to lead multi discipline and multi national teams
- High interest in self reliant management of challenging projects through a well structured, conceptional and entrepreneurial approach
- High flexibility and mobility
- Good business economics knowledge and good computer application skills
- Very good English language skills, some German language skills would be good

Our customer will offer you excellent conditions for a successful work and will support you in your personal career development within a large and first class global player. This starts with a training in Europe after your selection as „Project Engineering Manager China“ and carries on in a career development plan.
